A Few Course Reflections On Leading Edge Certification for the Administrator

I completed the LEC Administrator program last spring and it was a tremendous experience for me. Not only did we learn about and use up to date tools, it allowed us to build a professional learning network among peers in the same field. Each assignment we completed was very practical, hands-on, and relevant to our every day job duties.

~ Director of Instructional Technology

LEC was totally relevant to my current work and provided a forum for me to really think about my vision and plan and then create a thoughtful plan to carry out.

~ Associate Superintendent

This program helped me develop cutting edge technology skills and taught me that a good school leader must also be constantly vigilant and aware of new practices in curriculum and instruction within technology.

~ Middle School Principal

I participated in Leading Edge Certification a year ago. It is perhaps the best professional learning opportunity I have ever experienced. I developed a deeper understanding of technology trends and issues by utilizing tech tools to synthesize my knowledge.

It changed the way I think about technology for students, staff, and myself. It empowered me to try new things in my quest to make complex ideas comprehensible. If you are looking for a "sit and get," this isn't the PD for you. It wasn't always easy but it was well worth the effort!

~ Director of Assessment & Accountability
